

PACP Driven Data Systems

With more and more cities requiring PACP data, it is vital to have a system designed to handle the specifications

THE NEW STANDARD

PACP, the standard adopted by NASSCO for the collection of Video inspection data in the sewer inspection marketplace, is here to stay with more and more Cities requiring PACP data. Thousands of operators and trainers are PACP certified by NASSCO through training courses conducted regionally throughout the US and Canada.

Because of the complex data collection and defect requirements incorporated into the PACP standard (approximately 200 defect

codes with specific rules for each defect), Cobra set about designing a new Data Logger to handle the work load for the Operator in the field. The CobraTouch™ CDL 9000 Series Data Logger is

The CobraTouch™ CDL 9000 Series Data Logger can be installed in any video inspection van. The database being used can be loaded into the CobraTouch™ and the data downloaded into the database in the truck. Alternatively, the data can be exported and transferred to any PACP certified database in the office.

The PACP Committee at NASSCO allows Users to add fields to the Work Order screen for particular requirements. The CobraTouch™ has optional fields to meet any specific requirements should additional fields be required. It should be noted there is NO latitude in the defect coding; NASSCO requires PACP defect codes must be used without modification or addition.

It is no longer appropriate for Engineers or Owners to specify particular software program(s) if they require PACP data collection. PACP is not vendor specific.

designed specifically to capture PACP data, images (JPEGs) and MPEG video files in the field.

The PACP Software Vendor Committee is in agreement that the certified software vendors will all be able to import and export data in and out of the PACP databases. There is no need to specify a particular database for use in a PACP environment. The CobraTouch™ will export PACP data into any of the certified PACP software making the CobraTouch™ universal in the PACP marketplace.

So Advanced ... It's Simple
